GHANA WASH PROJECT

*A Partner in Attaining Corporate
Social Responsibility Objectives*

Constructing hand-dug wells for communities.

Building latrines to improve sanitation.

The GHANA WASH PROJECT

The **Ghana WASH (Water, Sanitation and Hygiene) Project** is a 4-year, \$13 million USAID-funded community development water, sanitation, and hygiene program in Ghana. The Ghana WASH Project is being implemented by Relief International, Winrock International and the Adventist Development Relief Agency. We assist in the achievement of Ghana's national WASH goals, with focused and comprehensive work at the community level in **5 regions, 16 districts, and more than 160 communities**.

By harnessing the synergies of public-private partnerships (PPP), we aim to expand our reach and directly provide innovative solutions to chronic water, sanitation and hygiene problems; at the same time, your partnership with us will provide a meaningful way for your organization to meet your corporate social responsibility objectives in the communities that you identify as requiring assistance.

Water, Sanitation, & Hygiene Promotion

The GWASH Project provides the following "hardware," or physical **Water and Sanitation Facilities**:

- Boreholes
- Hand-dug wells
- Small-town piped water systems
- Surface water treatment facilities in rural and peri-urban areas
- Institutional latrines
- Rainwater harvesting systems
- Hand washing stations in schools and clinics

Among other outcomes, our implementation of **CLTS (Community-Led Total Sanitation) initiatives** will lead to the provision of almost **5,000 household latrines** by the end of the project in August 2013.

We also provide "software," or **Behavior Change Communication and training** activities, which includes the formation of local water and sanitation (watsan) committees, **training of community-based hygiene promoters**, and **monitoring support for hygiene and sanitation promotion** in communities.

The Project provides considerable follow-up and support to the communities served.

School Health Education Program (SHEP)

In addition to our community activities, the Ghana WASH Project is an **active partner with primary and secondary schools** throughout our intervention zone. We are currently providing water, sanitation and hygiene education support to **69 schools in 11 districts**.

In our collaboration with the Coca-Cola Foundation and USAID, we are undertaking an ambitious project **targeting 8,000 students** at the Ledzokuku-Krowor Municipal Assembly (LEKMA) South and North cluster of schools (Teshie). As a result of this initiative, Coca-Cola Foundation and USAID will **provide sanitation facilities, a biogas waste treatment system, a 150m³ rainwater harvesting system and significant hygiene educational support** including educational comic books, school health club support, guidance and outreach.

Partnering to Achieve WASH Objectives

Partnership initiatives enable us to provide innovative solutions to chronic water, sanitation and hygiene problems in areas, which have been targeted by our private sector partners.

Constructing water treatment facilities.

Training local artisans in latrine construction.

Providing rainwater harvesting systems to schools.
